Site security/fire brigade

Onsite safety is of primary importance

The chemical site is enclosed by a 25-kilometer-long safety fence. Three gates are manned by the site security service; eight additional gates are equipped with automatic entry-control systems.

Security measures taken include a gate security and patrol service. Our onsite security department can investigate cases of theft, burglary, damage to property, misuse of documents and breach of environmental laws upon request of our customers.

We can undertake the inspection of the transportation of dangerous goods, the signing-in of visitors and the issuing of identity cards and entrance permits for vehicles.

Our firefighters are on standby around-the-clock. Present in two fire stations, they guarantee a high level of security for both people and property. We will be glad to advise you on questions of fire prevention equipment or help you in training your employees.

Both the site safety department and the fire brigade are overseen by our computer-supported safety headquarter. All emergency calls and alarms are handled here. This enables us to coordinate the activities of our safety and security branch from a central location. Communication links exist to the district control center of the Saalekreis as well as to all companies located at the chemical site Leuna.
